PROFESSIONAL EXPERIENCE

Product Development Intern | Kaari Labs (Remote)

May 2026 – Jul 2026

- Scoped and documented four core product flows (image-to-3D generation, segmentation, uploads, embeds) as structured PRDs, aligning engineering and non-technical stakeholders on requirements before build started.
- Prioritized a working 3D product configurator prototype over additional documentation, using real 3D models and interactive material controls to test the core “try before you generate” experience with the team.
- Translated ambiguous asset-management requirements into structured specs, cutting back-and-forth between design and engineering during the build phase.

Business Development Intern | Fourfive (Remote)

Jun 2026 – Aug 2026

- Owned the client outreach and lead-gen pipeline for early-stage founders across India and UAE, using response-rate data to decide which messaging to keep, cut, or test next.
- Built the founder’s content strategy and GTM playbook, including a dual-track content plan and a reference-accounts framework, to prioritize which audiences and formats to invest in first.
- Managed first-touch through qualification for inbound leads, deciding which prospects to escalate based on fit and response signals.

Freelance Web Developer | Digiculum (Client Project)

Mar 2026

- Scoped requirements directly from client conversations and set build priority across iterative Agile sprints, shipping a production course-selling platform end-to-end.
- Chose to route video delivery through unlisted YouTube hosting instead of paid infrastructure, cutting hosting costs while keeping playback quality unchanged for the client.

PROJECTS

MediSchedule — Healthcare Coordination Platform (Link: medischedule-eight.vercel.app)

- **Problem:** Clinics had no lightweight way to separate emergency from routine patients, or coordinate care, without exposing personal phone numbers.
- **Decision:** Split the queue into emergency and normal tracks from the first build, instead of a single generic queue, after mapping how a clinic actually triages walk-ins.
- **Outcome:** Shared the live product with real patients and clinic staff for feedback and iterated the queueing logic based on their input, rather than pushing for broad adoption.

LinkedIn Growth OS — AI Personal-Branding SaaS (Link: linkedin-growth-os-omega.vercel.app)

- **Problem:** Founders and creators know they should post consistently on LinkedIn but generic AI writing tools make their posts sound nothing like them.
- **Decision:** Built an onboarding flow that captures a user’s actual writing voice before generating any content, betting that authenticity would matter more than raw speed; used Groq + Llama 3 to keep generation fast enough not to break that flow.
- **Outcome:** Tested voice-matching accuracy with early users and iterated the prompt design based on their feedback.

ResumePilot — AI Resume Tailoring Tool (Link: resumecopilot-five.vercel.app)

- **Problem:** Candidates rewrite resumes for every job posting with no way to know if their bullets actually match what an ATS is scanning for.
- **Decision:** Designed the scoring engine to flag gaps against the job description, then constrained the rewrite engine to only use the candidate’s real, existing experience — trading impressive-sounding output for honest, ATS-safe output.
- **Outcome:** Used it on my own applications and shared it with peers for feedback on scoring accuracy and rewrite quality.

EDUCATION

B.Sc. Computer Science, BK Birla College, Kalyan — University of Mumbai | CGPI: 9.24/10

May 2026

SKILLS

- **Technical:** React.js, Next.js, TypeScript, Node.js, Supabase, SQL (MySQL), Python (foundational), Excel, API fundamentals
- **Analytics:** Product Analytics & A/B Testing, Product Metrics (Activation, Retention, North Star)
- **Design Thinking:** Product Discovery & User Research, PRDs, AI Product Evaluation
- **Platforms:** Claude, Cursor, ChatGPT, Lovable, Figma, Git/GitHub, n8n Automation
- **Soft Skills:** Client & Stakeholder Communication, Agile & Scrum

CERTIFICATIONS

- **Anthropic — AI Fluency & Claude 101 (Skilljar):** prompt design fundamentals and applied use of Claude across product workflows.
- **Deloitte — Data Analytics Virtual Internship (Forage):** simulated data analysis project covering forecasting and client-facing recommendations.
